# AD management

written by archi | 22 października 2019

## AD-management – version 0.7

A Web-based tool for managing Microsoft Active Directory. Built on PHP based on the LDAP protocol for communication with AD.

Available functions:

```
viewing AD tree containers
adding users with group membership
deleting users
blocking and unblocking
account expiration time management
displaying account statuses
possibility of cooperation with another LDAP tree
support for the Services for Unix extension (SFU)
automatic UIDNumber management (Unix attribute)
```
